INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY (SEPARATE SHEET)

International application No.

PCT/IB 03/04720

Re Item V

Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

The application is related to methods (claims 1, 7 and 13), a system (claim 22), apparatuses (claims 34 and 38) and a computer program (claim 17) for providing a user device with a set of access codes which will be transferred in encrypted form.

Document D1, being considered the closest prior art, discloses a mechanism for a user to request a file to be transferred and for the server to encrypt the requested file and to deliver it to the user.

The essential difference between the subject-matter of the present application and D1 is that the present application provides the user with an updated set of access codes when the number of unused access codes reaches a threshold.

The invention solves the problem of providing the user with an updated list of access codes.

In order to solve this problem, a request is triggered for an update by a threshold of the number of used access codes.

The available prior art does not disclose or suggest either the problem as defined above or the solution. Therefore, the subject-matter of said independent claims is novel and considered to involve an inventive step (Article 33(2) and (3) PCT). The subject- matter of said claims is also industrially applicable (Article 33(4) PCT).

Dependent claims 2-6, 8-12, 14-16, 18-21, 23-33, 35-37 and 39-41 relate to further implementing details of the invention defined in the independent claims to which they refer and are thus equally novel, inventive and industrially applicable (Article 33 PCT).
